

## STRESEEZ PLUS®

A 10-gram packet for smaller-scale poultry flocks

Product Code #2028

The 100-dose packet of **GROGEL PLUS B** (with beneficial Bacteria) has been a great success. That tells us the smaller-scale producer would also benefit from a smaller, more convenient size...of **STRESEEZ PLUS**. That's our market-leading, water-dispersible powder containing a proper nutritional balance of vitamins, trace minerals and electrolytes.

Until now, the smallest packet size of **STRESEEZ PLUS** has been 6 ounces—enough for 28,000 one-week old chicks. Our new *10-gram foil packet* of **STRESEEZ PLUS** is perfect for producers with flocks of less than 100 birds. There are 100 packets per carton. The product code is #2028.

**STRESEEZ PLUS** is a natural companion product for **GROGEL PLUS B**: The young chick consumes **GROGEL PLUS B** on the day of placement, and then benefits over the next few days from **STRESEEZ PLUS** in the drinking water. Together they launch the chick on a healthy trajectory for the grow-out period.

After that first week, **STRESEEZ PLUS** is used as a *nutritional booster* for a few days each month, and of course during any *period of stress*.

**STRESEEZ PLUS** is favored for its optimum plane of nutrition and excellent balance, and for its consistent fine blend. It dissolves readily in drinking water for quick absorption by the bird.

There are 100 x 10-gram packets in each carton. Each packet provides about 50 chicks with a 4-day treatment during the first week of age, plus another 4 days during the second week. In week 4, two additional packets are required for 50 chicks for 4 days of water supplementation.
