# BULLETIN

**DAWSCAP** is a concentrated nutritional supplement, in an easy-to-use, number 10 gelatin capsule. It contains essential vitamins and trace minerals, plus bacterial strains, yeast cultures, enzymes, and active dry yeast, all of which help to:

Restore metabolic processes when cattle are off-feed due to stresses such as:

- Diet Change
- Parasitism
- Drug Therapy
- Convalescence

Precondition animals for:

- Changes in Feeding Programs
- Freshening (before and after)

During an extensive period of field testing, DAWSCAP proved its benefits to a number of large dairymen in California and Arizona.

Some typical comments:

*"When a cow goes off-feed or is down from rumen disorders, we administer **DAWSCAP**. Recovery results are excellent."*

*"I use **DAWSCAP** whenever bringing in replacement heifers. My animals come into full feed much faster."*

*"All of our sick cows receive **DAWSCAP** daily, both in the morning and in the afternoon. Those capsules sure get our cows back on feed in a hurry."*

**DAWSCAP** capsules are a valuable complement to well-balanced feeding programs. Because they are concentrated, the normal recommended dosage per animal is only 2 to 4 capsules per day for a period of 3 or more days.

They are easily administered by balling gun, or the contents can be sprinkled on feed.
