GROGEL PLUS with DPP is a supplement and attractant for day-old poultry and a source of live (viable) naturally occurring microorganisms. Mixed with water, it provides hydration and concentrated nutrients to get hatchlings off to a great start.

GUARANTEED ANALYSIS: Crude Protein (min) 9%, Fat (min) 2%, Fiber (max) 19%, Total Bacteria 20 million cfu/g.

INGREDIENTS: Plant Protein Products, Super Absorbent Powder, Processed Grain By-Products, Vegetable Oil, DL-Methionine, L-Lysine, Vitamin A Supplement, Vitamin D3 Supplement, Vitamin E Supplement, Ascorbic Acid, Menadione Sodium Bisulfite Complex (Source of Vitamin K Activity), Calcium Pantothenate, Thiamine Mononitrate, Riboflavin Supplement, Niacin, Pyridoxine Hydrochloride, Biotin, Folic Acid, Vitamin B12 Supplement, Sodium Chloride, Lactobacillus acidophilus, L. casei, L. Reuteri, Bifidobacterium bifidum, B. thermophilum, B. animalis, B. infantis, Enterococcus faecium, Bacillus subtilis, B. licheniformis, Dextrose, Dried Skim Milk, Food Grade Dye.

SUGGESTED USES: For hatchlings to start off well they need prompt access to water and feed. The earlier access promotes more rapid development of the digestive tract and the immune system. In turn this results in improved livability and as much as 5% to 7% heavier bodyweights. GroGel Plus provides an easy means by which just-hatched chicks and poults can receive immediate nutrition and hydration. A unique formulation, GroGel Plus is tailored specifically for the limited amount a hatchling can eat, and for the immature nature of its digestive tract. In a soft palatable gel, GroGel Plus supplies crucial nutrients in the most concentrated, digestible forms and beneficial bacteria to establish a healthy gut microflora.

INSTRUCTIONS: Each poul, chick, or duckling should get AT LEAST a dose of 1 ml (1 cc) of the mixed product (one liter, or approximately one quart of water per 1,000 doses). For maximum hydration up to 2x water can be added.

TO MIX AND DELIVER: Slowly mix 70 grams dry product and 1 liter or quart of water to make each 1,000 doses. Stir continuously. Wear the rubber gloves to prevent green stains on hands. Make sure no lumps of dry material remain. More water can be added at any time; up to twice the recommended amount.

IN THE HATCHERY: After mixing, dispense approximately 25 ml (1/8 cup) in a corner of each quadrant of each poul or chick box (100 ml (1/2 cup) total per each box). If extra water was used, increase the amount (up to 2 ml per chick or poul). Use a spoon or scoop or the plastic bag. Plastic bags with a corner cut out (like those used for pastry) work well for small batches.

ON THE FARM: After mixing, scoop about 1/2 cup (100 ml) onto a feed flat with the first feed or onto a piece of paper or cardboard before chicks are placed. It is not necessary to scatter; they will approach and peck at it. After 30-60 minutes under good lighting, the **GroGel Plus DPP** will be gone. Dim light will take longer.

Use warm **salty** water to remove unused **GroGel Plus DPP** from containers or drains.
